Message from the CHAIRMAN AND PRESIDENT

Rider Levett Bucknall Philippines, Inc. proudly presents to you the eleventh Philippine Edition of "Riders Digest," a compilation of cost data and related information in the Philippine Construction Industry.

Rider Levett Bucknall Philippines is a member of the Rider Hunt, Levett & Bailey, and Bucknall Austin Group now RIDER LEVETT BUCKNALL (RLB), an independent global property and construction practice with 120 offices in 80 different countries covering six continents namely OCEANIA, which covers all of Australia and New Zealand; ASIA, which covers The Philippines, China, Hong Kong, Indonesia, Japan, Korea, Malaysia, Singapore, Taiwan, Thailand and Vietnam; EMEA, which covers Europe and Middle East; NORTH AMERICA which covers Phoenix, Boston, Chicago, Denver, Honolulu, New Jersey, Las Vegas, Los Angeles, Florida, Portland Oregon, San Francisco, Seattle, and Washington DC together with Canada; and SOUTH AFRICA which includes Cape Town, Johannesburg, and Pretoria.

Our group employs almost 4,000 people in its offices across the world, integrating local knowledge and expertise with access to the global network to provide the best and most up-to-date service our clients deserve. Our open communication and interaction between offices transform to greater experience across every sector in the Construction Industry. The Philippine office is now operating in its 34th year, having commenced its operation in 1989.

We have provided our Quantity Surveying and Project/Construction Management Services on over 1,300 projects in the Philippines, ranging from Office Towers, Residential Condominiums, Hotels, Residential Estates, Industrial Development Plants, Institutional Schools, Ports and Harbors, Roads and Bridges, Airports and Airport Buildings, Commercial Centers, Hospitals, BPOs, and Land Development Works. We have also served a number of overseas projects within the Pacific Rim including Guam, Saipan, Palau, Hawaii, Australia, Malaysia, Vietnam, and as far as the Middle East, Pakistan, and Syria.

Our corporate vision is to be the leading global practice in our respective market and deliver sustainable and competitive advantage to our clients through the passion of our people and our focus on integrity, professionalism, innovation, team work, and client satisfaction. We have adopted our core values and objectives, together with our global network and in-depth knowledge, making Rider Levett Bucknall Philippines, Inc. truly unique and consistent in providing quality services to our clients.

Our combined experience and expertise enable us to provide excellent and efficient services. We protect our integrity, optimize the use of resources, and create maximum performance and value throughout the life cycle of every project we handle. Rider Levett Bucknall Philippines, Inc. is committed to developing tools and techniques that help our clients save costs while getting their desired results, not only at present, but also in the future.

The entire Rider Levett Bucknall Group ensures that a significant fund is allocated for research and development programs, uses the latest technology, and develops training to maintain quality staff performance.

The publication of our Riders Digest and International Report on Construction Market Intelligence from our global network of offices will continue to be beneficial by providing professional input, expert advise, and value added services to our clients. As key resources in the International Construction Industry, these will prioritize benchmarking of construction services throughout the International market.

Rider Levett Bucknall Philippines, Inc. hopes that you find this publication informative and useful, aiding in the successful completion of your construction needs.

Corazon Clemeña Ballard
CHAIRMAN & PRESIDENT
Rider Levett Bucknall
Philippines. Inc.

QUALITY POLICY STATEMENT

ISO 9001:2015 CERTIFICATE

RIDER LEVETT BUCKNALL PHILIPPINES, INC.

QUALITY POLICY STATEMENT

RIDER LEVETT BUCKNALL PHILIPPINES' Policy is to provide optimal services in accordance with stated customer requirements. Guided by our principles of excellence, quality and sustainability, we foster lasting customer confidence and business relations while meeting our contractual obligations. The services we offer in full or in combination are as follows:

- Quantity Surveying (QS)
- Project Management (PM)
- Construction Management (CM) Special Services within our expertise

We are ambitious and dedicated to push outside the boundaries of limitations to capture and implement innovations relevant to our company goals and stakeholder needs and expectations.

We are steadfast in our compliance to our managements systems and our Chairman and President has the ultimate authority and responsibility to ensure continuing effectiveness and improvement of our policies and processes conformable to international and global

It is part of our company's training programme that this policy is understood, implemented and maintained at all levels in the organization. It is also communicated to our stakeholders for their information and cooperation.

This statement represents our executive management commitment, on behalf of the Corporation, to the Quality Policy.

Signed

Chairman & President

Summary of Current Regional Daily Minimum Wage Rates

Definition of Terminologies

Central Business District (CBD)

The Central Business District is within the Metro Manila cities of the Philippines. It consists of seven planning areas, namely Makati City, Global City-Taguig, Quezon City, Pasig City, Mandaluyong City, San Juan, and Manila. It is the prime area of all the commercial and financial activities in the region and includes developments from nearby provinces around the perimeter of Metro Manila.

The office within the CBD refers to good quality office buildings located at the Central Business District, for the upper range of the rental market and leading owner occupiers, such as head quarter offices for financial institutions and major companies.

Offices outside CBD refer to medium quality office buildings that are built for the middle range of the rental market.

Construction Floor Area (CFA)

CFA is the area of all building enclosed covered spaces measured to the outside face of the external walls, including covered basement and above ground car park, areas.

Gross Floor Area (GFA)

GFA is the sum of fully enclosed covered areas and the unenclosed covered areas of the building for purposes of planning submissions (refer to Page 59: Measurement of Building Areas for more information).

Net Lettable Area (NLA)

NLA is the total tenancy area designated for rentable purposes.

Building Works

Building Works include substructure (piling, foundation, and basement), super-structure, architectural works, finishes and fittings, external works, site works, preliminaries, attendance, and other builder's work in connection with services.

Building Services

Building Services include mechanical services, including heating, air conditioning, mechanical, ventilation, fire protection system, sanitary, and plumbing; and electrical services, which include electrical installation, vertical transportation, and building management systems. Exclusions; Special equipment – Chutes, incinerators, compactors, pneumatic refuse disposal system, facade maintenance equipment, engineered smoke control systems etc., IT services – high speed cables etc.

Hotels

Types of hotels listed are based on 'five-star', 'four-star' and 'three-star' international hotel ratings.

Retail - Shopping Malls

Shopping malls with typical amenities and finishes in common spaces. Exclusions: Tenant equipment, shop fittings and finishes in tenancy spaces.

Industrial Buildings

Quality reflects a simplified type of construction suitable for light or heavy industries, Exclusions: Special and operating equipment, processing plant and proprietary systems.

Residential

Ratio of kitchen, laundry and bathroom areas to living areas and the quality of finishes required will affect the cost range. Range given is significantly affected by the height and configuration of the building. Exclusions: Show apartments. Loose furniture, special light fittings, household electrical appliances, kitchen equipment and building owners' special requirements.

Institutions of Higher Learning

Tertiary educational schools such as universities, polytechnics, and other colleges that require full range of educational facilities and amenities.

Car Park

Above Grade - minimal external walling excluding mechanical ventilation.

Basement - diaphragm wall or contiguous bored piles wall with standard mechanical ventilation provisions.

Building Construction Prices

All construction prices for the Philippines are indicative only and are as at Fourth Quarter 2022. Items generally excluded from the order of costs are land costs, legal and professional fees, development charges, authority fees, finance costs, loose furniture, fittings, art works, tenancy works such as but not limited to

Note: As foreign currency exchange rates fluctuate on a daily basis, we have not converted the Philippine Peso rate to foreign currencies.

Fit-Out Works

The following costs varies within the wide range and dependent on the quality of finishes specified for good quality office and hotel accommodations. Scope of fitout includes preliminaries, floor, wall and ceiling finishes, painting, timber fitments, sanitary wares and bathroom accessories, glazing at bathroom, installation of decorative lighting, curtains and blinds. Costs are exclusive of loose items, such as but not limited to furniture, room equipment and appliances, supply of deorative lighting and bedding.

| Type of Tenancy Philippine Peso per Square Metre | Open Planned Php /m² | Fully Partitioned Php /m² |
|--|----------------------------|---------------------------------|
| Office Fit-out per square meter | 49,300 | 138,000 |
| Hotel Fit-out, Five (5) Star, per room | 9,180,000 | 13,010,000 |
| Hotel Fit-out, Four (4) Star, per room | 6,069,000 | 8,930,000 |
| Hotel Fit-out, Three (3) Star, per room | 2,601,000 | 7,568,058 |

Refurbishment Works

The following refurbishment costs include demolition and removal of partitions and internal finishes, provide new floor, ceiling and wall finishes but excluding fit-out. The lower end of the range indicates re-use and modification.

| Type of Office Philippine Peso per Square Metre | Ph | o / m² |
|--|---------|---------|
| Office Refurbishment | 57,700 | 143,100 |
| Hotel Refurbishment, Guest Room | 82,300 | 151,000 |
| Hotel Refurbishment, Main Lobby | 90,200 | 230,000 |
| Hotel Refurbishment, Restaurant | 155,000 | 205,000 |

Hotel Fit-Out

The cost of typical hotel guest room fit-out varies within its wide range of services and amenities offered and is dependent on the quality of finishes specified for different rating hotels. Scope of fit-out includes preliminaries, wall, floor and ceiling finishes, painting, timber fitments, sanitary wares and bathroom accessories, glazing at bathroom, installation of decorative lighting, curtains, blinds, etc. These costs exclude loose items, such as but not limited to furniture, room equipment and appliances, supply of decorative lighting, and bedding.

| Hotel Rating Philippine Peso per Square Metre | Php / | Room |
|---|-----------|------------|
| Three Star | 9,180,000 | 13,010,000 |
| Four Star | 6,069,000 | 8,930,000 |
| Five Star | 2,601,000 | 7,568,058 |

External Works

| LANDSCAPING Philippine Peso per Square Metre | Low | High |
|---|---------|-----------|
| Softscape | 4,240 | 32,900 |

| Mechanical Parking (Cost Platform and System) | 570,000 | 1,370,000 |

Building Services

Definition of Terminologies

HVAC (Heating Ventilation and Air Conditioning)

HVAC includes chiller plant, cooling towers, chilled water, condenser water pumps and pipework, air-handling unit systems, and fan coil systems.

It also includes AC ductwork, diffusers, split type air-conditioning units and ductwork, mechanical ventilation ('MV') fan system, MV ductwork, diffusers and accessories, AC electrical, and automatic control works where appropriate.

Sanitary & Plumbing

Sanitary & Plumbing works refer to water tanks and pumps, hot/cold water distribution piping, installation of water piping to sanitary ware and fittings, installation of waste piping to sanitary ware, aboveground and underground drainage piping system where appropriate.

Fire Protection System

Fire Protection system includes sprinkler, external fire hydrants, hosereels, wet and dry risers, automatic fire alarms, and fire extinguishers where appropriate.

Electrical Installation

Electrical Installation refers to power transformer, substation, HV & LV switch gear, distribution/sub-main cables, final sub-circuits, cable support systems and containments. Lightning protection system, earthing system, luminaries and lightning control system, standby generators, telecommunications system, public address system, intercom system, and MATV/CATV system may also fall under Electrical Installation, where appropriate.

Vertical Transportation

Vertical Transport spans Lifts, Escalators, Travelators, Dumbwaiters, etc, where appropriate.

Building Management Systems (BMS)

 $\ensuremath{\mathsf{BMS}}$ include Control Systems (mainly for HVAC services) where appropriate.

Exclusions

Security Systems, IT systems, AV systems, car parking System, compactors, chutes; special equipment such as proprietary systems, medical gases, incinerators, pneumatic refuse disposal system, facade maintenance equipment, engineered smoke control systems etc.; supply of kitchen equipment.

Estimating Data

Reinforcement Ratios

Average Construction Payment Drawdown

Vertical Transport Services

Reinforcement Ratios

The following ratios give an indication of the average weight of high tensile rod reinforcement per cubic metre of concrete (Grade 35) for the listed elements. Differing structural systems, ground conditions, height of buildings, load calculations and sizes of individual elements and grid sizes will result in considerable variation to the stated ratios. For project specific ratios, a civil & structural engineer should be consulted.

| Element | Ave kg / m³ |
|---------------------------|-------------|
| Pile caps | 115 - 250 |
| Bored Piles (compression) | 30 - 60 |
| Bored Piles (tension) | 150 - 250 |
| Raft Foundation | 150 - 220 |
| RC pad footings | 70 - 100 |
| Ground beams | 200 - 300 |
| Basement | Ave kg / m³ |
| Retaining Wall | 150 - 250 |
| RC Wall | 125 - 150 |
| Slab | 100 - 200 |
| Edge Beams | 220 - 300 |
| Above Ground | Ave kg / m³ |
| Columns | 250 - 500 |
| Beams | 180 - 300 |
| Slab | 110 - 200 |
| Walls (core) | 130 - 320 |
| Lift Core | 125 - 200 |
| Household Shelter | 200 - 300 |
| Stairs | 130 - 160 |

Average Construction Payment Drawdown

The tabulation below is derived from the statistical average of a series of case histories, which gives an indication of the anticipated rate of expenditure when used for a specific project for preliminary budgetary purposes. All data are related to the date of submission of contractors' claims to the client and not actual payment, which is generally one month later.

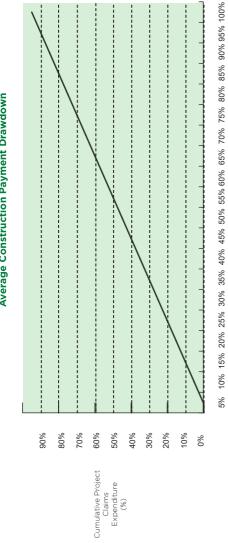

No adjustment has been made for the retention money on the assumption that such money will be paid by the client into a joint account with the Contractor. The payment of the outstanding monies due to the contractors and sub-contractors after the date of practical completion takes place at irregular intervals with payments spread over an indefinite period.

The average rate of claims expenditure on construction projects are from Php 100,000,000 to PhP 1,300,000,000 and/or greater than one year but less than two years construction period to practical completion.

| Contract Period | Overall Project |
|-----------------|-----------------|
| % | % |
| 5 | 0.75 |
| 10 | 2.70 |
| 15 | 5.71 |
| 20 | 9.65 |
| 25 | 14.40 |
| 30 | 19.80 |
| 35 | 25.73 |
| 40 | 32.06 |
| 45 | 38.65 |
| 50 | 45.40 |
| 55 | 52.85 |
| 60 | 60.15 |
| 65 | 67.15 |
| 70 | 73.68 |
| 75 | 79.60 |
| 80 | 84.79 |
| 85 | 89.07 |
| 90 | 92.29 |
| 95 | 94.32 |
| 100 | 97.50 |

Note: The remaining 2.5% would be released after a period of six to twelve months after hand-over of the project

Notes:

Lift types up to 17-passenger capacity serving not more than 18 floors are more commonly equipped with motor room-less systems.

Costs provided above are indicative and vary depending on the brand name and technical specifications.

International Construction

Specific Definitions for International Construction Costs

Building Costs

Construction Market Activity Cycle Model

Sector Data

Specific Definitions for International Construction Costs

Office Building

Premium Offices

Refer to landmark high-quality office buildings located in a major Central Business District (CBD) office market, which are trendsetters in establishing rents and accommodating leading owner occupiers including headquarter buildings for banks, insurance, multi national corporations and other major companies.

Grade A Offices

Refer to high quality buildings which are built for the middle range of the rental market.

Hotel

Range of costs exclude FF&E.

Industrial

Quality reflects a simplified type of construction suitable for light industry.

Residential

Owner Occupied

Multi-storey units reflect medium to luxury quality, air-conditioned, and accommodation up to 20-storeys in height.

Investment

Reflects low-medium quality with basic fit-out provisions.

Note

The ratio of kitchen, laundry, and bathroom areas to living areas and finishes required will affect the cost range. Range given is significantly affected by the height and configuration of the building.

Exclusions:

Loose furniture, carpet, special light fittings, washing machines, dryers, refrigerators, and tenants special requirements.

Building Costs

All costs are stated in local currency as shown below, as at Fourth Quarter 2022. The following data represents estimates of current building costs in the respective market. Costs may vary as a consequence of factors such as site conditions, climatic conditions, standards of specification, market conditions etc.

| | | | Cost | per m² | |

Rates are in national currency per sqm of Gross Floor Area except as follows:

Chinese cities, Hong Kong and Macau: Rates are per square metre of Construction Floor Area, measured to outer face of external walls.

Singapore, Ho Chi Minh City, Jakarta and Kuala Lumpur: Rates are per square metre of Construction Floor Area, measured to outer face of external walls and inclusive of covered basement and above ground parking areas.

Chinese cities, Hong Kong, Macau and Singapore: All hotel rates are inclusive of Furniture. Fittings and Equipment (FF&E).

Building Costs

All costs are stated in local currency as shown below, as at Fourth Quarter 2022. The following data represents estimates of current building costs in the respective market. Costs may vary as a consequence of factors such as site conditions, climatic conditions, standards of specification, market conditions etc.

Construction Market Activity Cycle Model

The Cycle Model illustrates the different growth and decline zones in a theoretical construction industry business cycle. The tabulation in the following page provides an overview of the relative growth/decline of each development sector in various cities. Each city has its own industry business cycle in the context of its own economy, and as such the performance of each development sector is not strictly comparable between cities. Reflected data is as at Fourth Quarter 2022.

Government System Implemented for Private and Public Construction

Construction Industry-Related Agencies

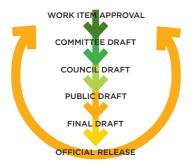

Building for Ecologically Responsive Design Excellence (BERDE)

BERDE is the National Voluntary Green Building Rating System in the Philippines. It is developed by the Philippine Green Building Council (PHILGBC), and is used to measure, verify, and monitor the environmental performance of buildings that exceeds existing mandatory regulations and standards. It is consensus-driven, and achieved through a multi-stakeholder consultation and collaboration process.

Version Development Process and Rating Scheme

In 2007, the PHILGBC formed the BERDE Program to develop a nationally accepted and recognized rating system. The BERDE Program is administered and implemented by the BERDE Committee, a multi-sectoral committee with members appointed by the PHILGBC Board of Trustees from its members and partners. This committee also serves as the program's Technical Management Board to ensure a technically balanced green building rating system.

A BERDE green building rating scheme undergoes a series of workshops and consultations with industry stakeholders before its final release and adoption.

BERDE Assessment and Certification for Buildings

1. Project Registration

The building owner submits the project information and commits to the certification process, and with compliance to all relevant building and environment laws, regulations and mandatory standards.

2. Design Assessment

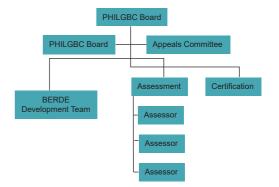

The project proponent submit design plans, specifications, calculations and other documented and verifiable proof

of compliance to the intent of BERDE. The certification body shall form a team of BERDE Assessors to review and assess the submittal. A project is deemed BERDE Design Certified once found compliant to BERDE and meets at least a cumulative score of 51.

3. Construction Assessment and BERDE Certification

Once the building is completely constructed and ready for occupancy and/or operational, the project proponents submit as-built plans and other robust documentation as evidence of compliance to the intent of BERDE. Once the project is found compliant with the requirements of BERDE and meets at least a cumulative point of 51, the project is certified BERDE and is presented with a rating equivalent to the points achieved.

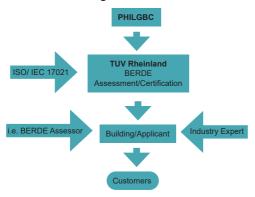

Developing the BERDE Certification Functional Chart

The PHILGBC Board of Trustees is the highest policy making body in the BERDE Rating System structure and owns the BERDE Certification Mark.

The BERDE Development Team drafts, finalizes, and approves the BERDE Rating Program. They conduct periodic review of the Rating Program and provide technical assistance, where necessary, in its interpretation. TÜV Rheinland Philippines undertakes the BERDE assessment activities, to include documentation review, assessment, and assessment reporting. They appoint a technical review or certification person/panel to independently review the Assessment Report and be responsible for the award of the BERDE Certification

BERDE Rating Certification Structure

Technical Assessors and Experts Pool

TÜV Rheinland Philippines supports the PHILGBC in the development of the criteria for the Technical Assessors and Experts. TÜV Rheinland Philippines maintains a list of its technical assessors and experts pool for the BERDE Rating Program.

TÜV Rheinland Philippines in collaboration with PHILGBC undertakes capacity building programs, such as trainings or workshops in order to qualify the technical assessors and experts and ensure that they have common understanding on the interpretation of the BERDE Rating system, thus ensure the consistent implementation and assessment of the BERDE Rating program. A regular Experience Exchange program shall be required to all qualified technical assessors and experts in order to maintain their appointment status.

As part of TÜV Rheinland Philippines' compliance with ISO/IEC 17021, it ensures that the designated assessment team, including the technical assessors and experts, are not in any way involved in the consulting for the applicant or project.

Proposed Timeline for BERDE Rating Program

Man-day Table and Fee Structure

TÜV Rheinland Philippines charges on a man-day rate basis for its assessment and certification and/or registration activities. TÜV Rheinland Philippines in collaboration with PHILGBC, develops a man-day table or matrix to determine how much time (man-days) is needed, considering the size and complexity of the project, such as location, size of lot, number of floors of the building, for the Assessment Team to spend for its assessment and certification activities, such as but not limited to documentation review, assessment and documentation/report preparation. TÜV Rheinland Philippines shall charge the current man-day rate and registration fees duly approved by PHILGBC and published accordingly.

Minimum Program Requirements

Each project must meet minimum requirements in order to quality for BERDE certification. All projects must comply with applicable environmental laws, be a complete permanent building or space, have a site boundary (distinct property lines), comply with minimum occupancy rates, commit to sharing whole building energy and water usage data, and comply with a minimum building area to site-area ratio.

Scoring and Rating

The BERDE Rating System provides a cross-cutting measure of building performance. Weighting is a central concern when combining performance across credits and credit categories. This work is an effort for the BERDE weighting system to address the social, economic and environmental impact priorities of the Philippines.

Objectives

The BERDE 1.0 Credit Weighting Tool was developed to provide a transparent and reproducible system for understanding building impacts and using this information to assign weights to individual BERDE credits. The workbook is a decision support tool that is intended to provide a framework for credit weighting – and not definitive answers.

Weighting Approach

The BERDE weighting system is based on the concept that the value of credits or CRITERIA will be determined by a basic weighting equation (see following page). This equation brings together information on indicators addressed, impact categories (i.e. social, economic, environmental), and the relative importance of CRITERIA indicators. This approach is implemented in a Microsoft Excel based workbook called the BERDE 1.0 Credit Weighting Tool. The tool ultimately provides a set of credit weightings such as those illustrated in the succeeding pages.

Basic Weighing Equation UN Sustainable Development Indicators Addressed X Social, Economic and Environmental Impacts X Relative Importance of Each Impact — Credit or Criteria Weight

Definitions:

Indicators Addressed:

Each BERDE requirement or criteria addresses different U.N. Sustainable Development Indicators (SDIs).

Environmental Impacts:

Each U.N. Sustainable Development Indicator belongs to different impact categories (Social, Economic and Environmental).

Relative Importance:

Each relevant Database Indicator, that belongs to different UN SDIs, compares the Philippines' standing against the rest of the world. The data puts the Philippines better or worse than the World average. A "worse than the world average" standing gives the indicator a relative importance.

BERDE for New Construction - Commercial Buildings SUMMARY OF POINTS

| Management | Points |
|-------------------------------------|--------|
| MN-PT-1 : BERDE Consultant | 2 |
| MN-PT-2 : Stakeholder Consultation | 6 |
| MN-PT-3 : Design Charrette | 1 |
| MN-PT-4 : Security | 1 |
| MN-PT-5 : Sustainability Commitment | 1 - 4 |

| Land Use and Ecology | Points |
|--|--------|
| LE-PT-1 : Land Re-use | 2 - 6 |
| LE-PT-2: Protection and Improvement of Ecological Features | 2 - 6 |
| LE-PT-3 : Pro-Local Biodiversity Open Space | 2 - 3 |
| LE-PT-4 : Heat Island Effect : Non-Roof | 1 - 2 |
| LE-PT-5 : Heat Island Effect : Building Roof | 1 |
| LE-PT-6 : Flood Risk Minimization | 2 |

| Water | Points |
|---|--------|
| WT-PT-1 : Water Sub-Metering | 1 |
| WT-PT-2 : Potable Water Consumption Reduction | 1 - 4 |
| WT-PT-3 : Efficient Landscape Irrigation | 1 - 2 |

| Energy | Points |
|---|--------|
| EN-PT-1 : Energy Sub-Metering | 1 |
| EN-PT-2: Energy Efficient Lighting | 1 |
| EN-PT-3 : Natural Ventilation | 1 |
| EN-PT-4 : On-Site Renewable Energy Generation | 1 |
| EN-PT-5 : Energy Efficiency Improvement | 1 |
| EN-PT-6 : Energy Efficient Building Envelope | 1 |
| EN-PT-7 : Energy Efficient Equipment | 1 |
| EN-PT-8 : Building Automation Systems | 1 - 2 |

| Transportation | Points |
|--|--------|
| TR-PT-1: Bicycle Rider Amenities | 1 |
| TR-PT-2 : Fuel Efficient and Low Emitting Vehicles | 1 |

PHILIPPINE CONSTRUCTION INFORMATION

| Transportation | Points |
|---|--------|
| TR-PT-3 : Parking | 3 |
| TR-PT-4 : Proximity To Key Establishments | 3 |
| TR-PT-5 : Public Access | 1 |
| TR-PT-6 : Contribution To Public Transport Amenities | 1 - 3 |
| TR-PT-7 : Public Transportation Access | 1 - 4 |
| TR-PT-8 : Transportation Impact Assessment | 2 |

| Indoor Environment Quality | Points |
|--|--------|
| EQ-PT-1 : External View and Daylighting | 1 |
| EQ-PT-2 : Illumination Control | 1 |
| EQ-PT-3 : Glare Control | 1 |
| EQ-PT-4 : Thermal Control | 1 |
| EQ-PT-5 : Indoor Air Quality | 1 |
| EQ-PT-6 : Microbial Contamination Prevention | 1 |
| EQ-PT-7 : Low VOC Environment | 1 |

| Materials | Points |
|--|--------|
| MT-PT-1 : Civil Works | 2 |
| MT-PT-2 : Electrical Works | 2 |
| MT-PT-3 : Architectural Works and Finishes | 2 |

Emissions

| EM-PT-1 : Pollutant and Greenhouse Gas Inventory | 2 |
|--|-----------------|
| EM-PT-2 : Ozone Protection | 1 |
| EM-PT-3 : Emission Control | 1 |
| | |
| Waste | Points |
| Waste | Points |
| Waste WS-PT-1: Construction Waste Diversion | Points 2 - 6 |

| Heritage Conservation | Points |
|---------------------------------------|--------|
| HC-PT-1 : Heritage Feature Protection | 3 |
| HC-PT-2 : Heritage Features Promotion | 1 |

| Innovation | Points |
|--|--------|
| IN-PT-1: Innovation In Design Or Process | 1 - 10 |
| IN-PT-2 : Innovation In Performance | |

| Under MN: | Points |
|--|--------|
| | |
| - Conduct a design phase commissionability review | 1 |
| - Conduct of extended commissioning after one year | 1 |
| Under LE: | Points |
| - Flood risk assessment report data based on 50-year, 24-hour rainfall | 1 |
| - Flood risk assessment report data based on 100-year, 24-hour rainfall | 1 |
| Under WT: | Points |
| - Installation of water submeters for major water usages accounting for 40% of total water consumption | 1 |
| - Integration of water metering system with BAS | 1 |
| Under EN: | Points |
| - BAS in place for monitoring MVAC | 1 |
| - Conduct of CFD studies of naturally ventilated spaces | 1 |
| - Annual energy reduction cost greater than 15% | 1 |
| - 25% energy reduction OR 150 kWH/m2 per year (12-hour operation) OR 300 kWh/m2 per year (24-hour operation) | 1 |
| - Energy modelling reports representing building performance | 1 |
| - 10% improvement above minimum EER for unitary A/Cs OR 10% improvement in efficiency baseline for chillers | 1 |
| - 20% improvement above minimum EER for unitary A/Cs OR 20% improvement in efficiency baseline for chillers | 2 |
| - 30% improvement above minimum EER for unitary A/Cs OR 30% improvement in efficiency baseline for chillers | 3 |
| - Inclusion of lifts, lighting, RE systems, and external loads in \ensuremath{BAS} | 1 |
| Under EQ: | Points |
| - Use of automatic lighting controls | 1 |
| - 100% compliance with required VOC levels for materials | 1 |
| Under MT: | Points |
| - Any three of the criteria identified in MT-PT-1 are met | 1 |
| - All criteria identified in MT-PT-1 are met | 2 |
| - All criteria identified in MT-PT-2 are met | 1 |
| | |

TOTAL POINTS

100 maximum points

LEED® Green Building Rating System

LEED, or **Leadership in Energy & Environmental Design**, is a green building certification program that recognizes best-in-class building strategies and practices. To receive LEED certification, building projects satisfy prerequisites and earn points to achieve different levels of certification. Prerequisites and credits differ for each rating system, and teams choose the best fit for their project.

I. BACKGROUND OF LEED®

Following the formation of the U.S. Green building council (USGBC) in 1993, the organization's members quickly realized that the sustainable building industry needed a system to define and measure "green buildings." USGBC began to research existing green building metrics and rating systems. Less than a year after formation, the members acted on the initial findings by establishing a committee to focus solely on this topic. The composition of the Committee was diverse; it included architects, real estate agents, a building owner, a lawyer, an environmentalist, and Industry representatives. This cross section of people and professions added richness and depth both to the process and to the ultimate product.

Features of LEED®

The LEED Green Building Rating Systems are voluntary, consensus-based, and market-driven. Based on existing and proven technology, they evaluate environmental performance from a whole building perspective over a building's life cycle, providing a definitive standard for what constitutes a green building in design, construction, and operation.

The LEED Credit Weightings

In LEED 2009, the allocation of points between credits is based on the potential environmental impacts and human benefits of each credit with respect to a set of impact categories. The impacts are defined as the environmental or human effect of the design, construction, operation, and maintenance of the building, such as greenhouse gas emissions, fossil fuel use, toxins and carcinogens, air and water pollutants, indoor environmental conditions. A combination of approaches, including energy modelling, life-cycle assessment, and transportation analysis, is used to quantify each type of impact. The resulting allocation of points among credits is called credit weighting.

The LEED 2009 credit weightings process is based on the following parameters, which maintain consistency and usability across rating systems:

- All LEED credits are worth a minimum of 1 point.
- All LEED credits are positive, whole numbers; there are no fractions or negative values.
- All LEED credits receive a single, static weight in each rating system; there are no individualized scorecards based on project location.
- All LEED rating systems have 100 base points; Innovation in Design (or Operations) and Regional Priority credits provide opportunities for up to 10 bonus points.

Given the above criteria, the LEED 2009 credit weightings process involves 3 steps:

- . A reference building is used to estimate the environmental impacts in 13 categories associated with a typical building pursuing LEED certification.
- The relative importance of building impacts in each category are set to reflect values based on the NIST weightings.
- Data that quantify building impacts on environmental and human health are used to assign points to individual credits.

Each credit is allocated points based on the relative importance of the building-related impacts that it addresses. The result is a weighted average that combines building impacts and the relative value of the impact categories.

II. OVERVIEW AND PROCESS

The LEED 2009 green building rating system for new construction and major renovations is a set of performance Standards for certifying the design and construction of commercial or institutional buildings and high-rise Residential buildings of all sizes, both public and private. The intent is to promote healthful, durable, affordable, and environmentally-sound practices in building design and construction.

Prerequisites and credits in the LEED 2009 for new construction and major renovations addresses 7 topics:

- Sustainable Sites (SS)
- Water Efficiency (WE)
- Energy and Atmosphere (EA)
- Materials and Resources (MR)

PHILIPPINE CONSTRUCTION INFORMATION

- Indoor Environmental Quality (IEQ)
- Innovation In Design (ID)
- Regional Priority (RP)

LEED 2009 for new construction and major renovations certifications are awarded according to the following scale:

Certified 40-49 points
Silver 50-59 points
Gold 60-79 points
Platinum 80 points and above

The Green Building Certification Institute (GBCI), which administers the LEED certification program, will recognize buildings that achieve 1 of these rating levels with a formal letter of certification.

When to Use LEED 2009 for New Construction

LEED for new construction was designed primarily for new commercial office buildings, but it has been applied to many other building types by LEED practitioners. All commercial buildings, as defined by standard building codes are eligible for certification as LEED for new construction buildings. Examples of commercial occupancies include offices, institutional buildings (libraries, museums, churches, etc.), hotels, and residential buildings of 4 or more habitable stories.

Registration

Project teams interested in earning LEED certification for their buildings must first register the project with GBCI. Projects can be registered on the GBCI website (www.gbci. org). The website also has information on registration costs for USGBC national members as well as non-members. Registration is an important step that establishes contact with GBCI and provides access to software tools, errata, critical communications, and other essential information.

Certification

To earn LEED certification, the applicant project must satisfy all the prerequisites and qualify for a minimum number of points to attain the established project ratings. Having satisfied the basic prerequisites of the program, applicant projects are then rated according to their degree of compliance within the rating system.

III. MINIMUM PROGRAM REQUIREMENTS

The LEED 2009 minimum program requirements (MPRS) define the minimum characteristics that a project must possess in order to be eligible for certification under LEED 2009. These requirements define the categories of buildings that the LEED rating systems were designed to evaluate, and taken together serve three goals: to give clear guidance to customers, to protect the integrity of the LEED program, and to reduce challenges that occur during the LEED certification process. It is expected that MPRS will evolve over time along with LEED rating system improvements. The requirements will apply only to those projects registering under LEED 2009.

To view the MPRS and the MPR supplemental guidance, visit the LEED resources and tools section at **www.usgbc.org.**

IV. Exemplary Performance Strategies

Exemplary performance strategies result in performance that greatly exceeds the performance level or expands the scope required by an existing LEED 2009 for new construction credit. To earn exemplary performance credits, teams must meet the performance level defined by the next step in the threshold progression. For credits with more than 1 compliance path, an innovation in design point can be earned by satisfying more than 1 compliance path if their benefits are additive.

The credits for which exemplary performance points are available through expanded performance or scope are noted In the LEED reference guide for green design & construction, 2009 edition and in LEED-Online.

LEED 2009 for New Construction and Major Renovations Project Checklist

| Sustainable Site | 26 possible | points |
|------------------|--|----------|
| Prerequisite 1 | Construction Activity Pollution Prevention | Required |
| Credit 1 | Site Selection | 1 |
| Credit 2 | Development Density and Community Connectivity | 5 |
| Credit 3 | Brownfield Redevelopment | 1 |
| Credit 4.1 | Alternative transportation: Public transportation access | 6 |
| Credit 4.2 | Alternative transportation: Bicycle storage and Changing rooms | 1 |
| Credit 4.3 | Alternative transportation: Low-Emitting and fuel-Efficient vehicles | 3 |
| Credit 4.4 | Alternative transportation: Parking Capacity | 2 |
| Credit 5.1 | Site Development: Protect or Restore Habitat | 1 |
| Credit 5.2 | Site Development: Maximize open space | 1 |
| Credit 6.1 | Stormwater Design: Quantity Control | 1 |
| Credit 6.2 | Stormwater Design: Quality Control | 1 |
| Credit 7.1 | Heat island Effect: Non-roof | 1 |
| Credit 7.2 | Heat island Effect: Roof | 1 |
| Credit 8 | Light Pollution Reduction | 1 |

| Water Efficiency | 10 possible points | |
|---------------------|------------------------------------|----------|
| Prerequisite 1 | Water Use Reduction | Required |
| Credit 1 | Water Efficient Landscaping | 2-4 |
| Credit 2 | Innovative Wastewater Technologies | 2 |
| Credit 3 | Water Use Reduction | 2-4 |

| Energy and Atmosphere | 10 possible points | |
|--------------------------|------------------------------------|----------|
| Prerequisite 1 | Water Use Reduction | Required |
| Prerequisite 2 | Water Efficient Landscaping | Required |
| Prerequisite 3 | Innovative Wastewater Technologies | Required |
| Credit 1 | Optimize Energy performance | 1-19 |
| Credit 2 | On-site Renewable Energy | 1-7 |
| Credit 3 | Enhanced Commissioning | 2 |
| Credit 4 | Enhanced refrigerant Management | 2 |
| Credit 5 | Measurement and Verification | 3 |
| Credit 6 | Green Power | 2 |

| Materials and resources | 14 possible points | |
|-------------------------|--|----------|
| Prerequisite 1 | Storage and Collection of recyclables | Required |
| Credit 1.1 | Building reuse: Maintain Existing walls, floors and roof | 1-3 |
| Credit 1.2 | Building reuse: Maintain Existing interior Non-structural Elements | 1 |
| Credit 2 | Construction Waste Management | 1-2 |
| Credit 3 | Materials Reuse | 1-2 |
| Credit 4 | Recycled Content | 1-2 |
| Credit 5 | Regional Materials | 1-2 |
| Credit 6 | Rapidly Renewable Materials | 1 |
| Credit 7 | Certified Wood | 1 |

| Indoor Environmental Quality | 15 possit | ole points |
|------------------------------------|--|------------|
| Prerequisite 1 | Minimum Indoor Air Quality Performance | Required |
| Prerequisite 2 | Environmental Tobacco Smoke (ETS) Control | Required |
| Credit 1 | Outdoor Air Delivery Monitoring | 1 |
| Credit 2 | Increased Ventilation | 1 |
| Credit 3.1 | Construction Indoor Air Quality Management Plan: During Construction | 1 |

PHILIPPINE CONSTRUCTION INFORMATION

| Indoor Environmental Quality | 15 possit | ole points |
|------------------------------------|---|------------|
| Credit 3.2 | Construction Indoor Air Quality Management Plan: Before Occupancy | 1 |
| Credit 4.1 | Low-Emitting Materials: Adhesives and Sealants | 1 |
| Credit 4.2 | Low-Emitting Materials: Paints and Coatings | 1 |
| Credit 4.3 | Low-Emitting Materials: Flooring systems | 1 |
| Credit 4.4 | Low-Emitting Materials: Composite Wood And Agrifiber Products | 1 |
| Credit 5 | Indoor Chemical And Pollutant Source Control | 1 |
| Credit 6.1 | Controllability Of Systems: Lighting | 1 |
| Credit 6.2 | Controllability Of Systems: Thermal Comfort | 1 |

WELL Building Standard (International WELL Building Institute)

The WELL Building Standard is the world's first building standard that was developed to fuse design with human health and wellness as its centrepiece. WELL is about the effect of the environment on the individual, both physiologically and psychologically. It is a whole new dimension and a holistic take of what it means to live well and healthy within the bounds of the built-in environment.

The WELL Building Standard was launched by design agency Delos Group, a New York-based developer whose founder, Paul Scialla introduced a new concept to improve the way people live by developing spaces that enhance occupant health and quality of life by sharing WELL principles globally. WELL version 1 was first introduced in October 2014 and through further research and studies, was developed and expanded into WELL version 2 that was launched in 2018. It is managed and administered by the International WELL Building Institute (IWBI), an American public benefit corporation and third-party certified by Green Business Certification, Inc. (GBCI), the same group that administers LEED certification.

WELL is an independently verifiable, performance-based system for measuring, certifying and monitoring features of the built environment that have impact on human health and well-being. It combines the best practices in design and construction grounded in a body of evidence-based medical and scientific research. It is designed to complement and work seamlessly with green building rating systems, such as LEED, living building challenge, three star, green star and bream.

WELL harnesses buildings as vehicles to support human health and well-being. WELL is composed of over 100 features that can be applied to each building project for a customized approach. Each WELL feature is designed to address issues that impact health and wellness through design, operations and behaviour.

WELL certified spaces and WELL compliant core and shell developments can help create a built environment that improves nutrition, fitness, mood, sleep patterns, productivity and performance of the people working, living, shopping, or playing inside of them. It is an investment in the world's most valuable asset - people.

PHILIPPINE CONSTRUCTION INFORMATION

WELL provides a framework for project teams to incorporate a variety of strategies to integrate human health and well-being at the heart of building design, construction and operations. It can add value to real estate assets, generate savings in personnel costs and enhance human health, well-being, and experience.

The WELL Building Standard™ version 2 (WELL v2™) is a vehicle that aspires to transform buildings and organizations in ways that deliver more thoughtful and intentional spaces to advance human health and well-being and help people thrive. WELL v2 includes a set of strategies backed by the latest scientific research

that aim to foster a culture of health and well being through design interventions and operational protocols and policies. This has been the mission since WELL was launched in 2014

Built upon the pioneering foundation of the first version (WELL v1); WELL v2 draws expertise from a diverse community of WELL users, practitioners, public health professionals and building scientists around the world. It can be applied across many real estate sectors. WELL is also organized into project types which take into account the specific set of considerations that are unique to a particular building type or phase of construction.

WELL v2: Equitable, Local, Dynamic

WELL v2 is a global tool being utilized in more than 50 countries. In order to tailor-fit it for people and spaces around the world, it approached the goal of globalization through a strategy of localization; taking into consideration regional health concerns, cultural norms and market realities. The latest version of WELL is designed to be regularly and proactively adapted to varying contexts and constructs, making it relevant and readily applicable to spaces and places across the globe.

WELL v2 is a dynamic tool since it is built in a system that can continuously learn, evolve and improve. With every WELL project comes a powerful opportunity to catalyze built spaces as mechanisms to deliver health and wellness benefits to all people within them.

In 2020, the International WELL Building Institute (IWBI) formed a Governance Council composed of key global thought leaders, doctors, public health professionals and business executives. The IWBI Governance Council is tasked with a dual purpose of upholding the integrity of the WELL Building Standard development process and accelerating market transformation at a global scale. The first task of the Governance Council was to vote confirm that WELL v2 meets the defined best practices for standard development and that each WELL feature meets four tenets:

1. Evidence-based

Each WELL feature is underscored by available evidence that links design, policy and built environment strategies to health and well-being outcomes. Features are substantiated by diverse and rigorous evidence-based studies, including peer-reviewed

literature; academic research; and leading design standards, laws, codes and best practices.

2. Verifiable

All WELL features are third-party verified by GBCI through documentation and/or performance testing.

3. Implementable

All WELL v2 features have been tested through WELL v1 and/or WELL v2 pilot demonstrating adoption and uptake by projects across the world.

4. Presented for outside input

At every step of the way, IWBI gathered feedback from a diverse community of practitioners, subject matter experts, users and other third parties to inform the development and evolution of WELL.

Principles of WELL v2

WELL v2 is founded on the following principles:

- Equitable: Aims to benefit a variety of people, including and especially disadvantaged or vulnerable populations.
- Global: Proposes interventions that are feasible, achievable and relevant across many applications throughout the world.
- Evidence-based: Draws upon a diverse and rigorous body of research across varying disciplines, validated by a collaborative body of experts, including IWBI advisors.
- Technically robust: Defines industry best practices and validates strategies through performance verification and a rigorous third-party verification process.
- Customer-focused: Sponsors the success of WELL users through dedicated coaching services, dynamic resources and an intuitive platform for navigating the journey.
- Resilient: Keeps pace with advances in research, science, technology and society, continuously improving by integrating new findings.

Project Types

WELL v2 projects fall into one of two main groups, determined primarily by ownership type:

· Owner-occupied

The project is mainly occupied by the project owner.

WELL Core

The project owner occupies a small portion of the project area and rents/leases most of the space to one or more tenants.

Owner-Occupied Projects: Interiors represent a particular case of owner-occupied projects, where the project owner rents/leases space within a larger building that is less than half the size of the base building.

WELL Core Projects: Is a distinct pathway for core and base buildings seeking to implement fundamental features to benefit tenants. In these projects, the majority of regular occupants are not affiliated with the project owner. Any building type can register for WELL Core, provided that at least 75% of the project area is occupied by one or more tenants and/or serves as common space in the building accessible to all tenants.

Concepts of WELL

The original WELL v1 promotes 7 concepts which were later expanded into WELL v2 that now comprise 10 concepts. Each WELL concept consists of features with distinct health intents. Features are either preconditions or optimizations.

| WELL v1 | WELL v2 |
|--|--|
| Air Water Nourishment Light Fitness Comfort Mind | Air Water Nourishment Light Movement Thermal Comfort Sound Materials Mind Community |

Each concept is broken down into features intended to optimize the health and well-being of the people inside a building through dedicated strategies and tactics, while minimizing harmful side effects associated with spending time indoors. Features ate categorized as either preconditions which are necessary to achieve all levels of WELL Certification or optimizations which create flexible pathways towards each certification level, Bronze, Silver, Gold, and Platinum.

The list that follows includes features and strategies that WELL Core projects often pursue to meet their certification goals.

 Air: Indoor environments are one of the only places where we have control of air quality. However, indoor air can be even more polluted than outdoor air if toxic materials or cleaning agents, which emit volatile organic compounds or semi-volatile organic compounds (VOCs and SVOCs) are present. Informed selection of building materials, thoughtful building maintenance and an effective ventilation system can help mitigate poor indoor air quality.

- Provide robust and responsive ventilation and filtration systems
- Mitigate exposure to mold and toxicants such as VOCs. lead and asbestos
- Utilize safer cleaning products and pesticides
- · Prohibit smoking onsite
- Prevent outdoor contaminants from traveling indoors at entrances
- Consider additional air sanitization and purification methods
- Water: Clean water is critical for maintaining health and preventing disease, but quality of water is affected by municipal treatment and can also be contaminated by biological, chemical and radioactive pollutants.

Base building water monitoring and quality control is the most effective way to ensure high quality water is delivered to tenants.

- · Provide access to high quality water
- Mitigate any water quality concerns
- Consider quarterly testing and advanced strategies such as carbon filters, reverse osmosis, and UV sanitization
- Nourishment: Food plays a vital role in chronic disease prevention and weight management, helping to control against the risk of diabetes, heart disease and cancer, all of which are linked to poor diet.

Building location and operation, including availability of healthy foods and beverages, appealing presentation of healthier food options, and marketing of healthy foods can profoundly influence the choices that people make when it comes to selecting snacks and meals.

- Provide hygienic hand washing stations and suitable supplies
- Create a supportive environment for healthy food consumption
- Consider availability of healthy food options in or near the building
- 4. Light: Daylight is necessary for human growth and development, and also controls our circadian rhythm. Exposure to artificial light during the evening and nighttime can negatively affect a range of physiological functions, including cognition and sleep quality.

Building design and fit out can positively influence both the quantity and quality of light provided to tenants.

- Provide access to daylight and close proximity to windows
- Prevent unwanted glare through window shading and shielding of lights
- Consider ambient lighting systems that provide circadian benefits
- 5. Movement: Frequent movement and regular exercise are key to achieving and maintaining optimal fitness, and promoting overall health and well-being. However, modern transportation, labor-saving conveniences and office-based jobs have created an environment in which millions of people not only fail to get the minimum amount of recommended daily physical activity, but also spend too much time being sedentary.

Thoughtful building location and design allow employees and other building visitors and staff to integrate short bouts of physical activity into their day.

- Use engaging design and placement for staircases
- Consider onsite amenities such as outdoor benches, fountains, bike storage, showers and/or gym facilities
- 6. Thermal Comfort: The indoor thermal environment not only impacts our buildings' energy use, as cooling and heating in developed and many developing countries account for approximately half of a building's energy consumption, but also plays a large role in the way we experience the places where we live and work.

Thermal comfort is linked to our health, well-being and productivity and is ranked as one of the highest contributing factors influencing overall human satisfaction in buildings. Your building's interior and exterior design, as well as informed decisions about materials and base building systems, influence occupant comfort.

- Maximize productivity through improved HVAC system design
- Provide optimal thermal comfort for building occupants
- 7. Sound: Feeling comfortable and relaxed can improve productivity and focus. However, many employees report that they are uncomfortable and distracted during the day as a result of a lack of control over their indoor environmental conditions.

While noise is ubiquitous, we can adopt technologies, practices and policies designed to create quieter environments and minimize our exposure to harmful and unnecessary noise.

- Create high quality acoustic environments and minimize intrusion of internally generated noises
- Consider enhanced acoustic treatments and thermal comfort methods
- Materials: Building materials and products are not only an integral part of our lives but, unlike most consumer goods, have a much longer use phase, making their chemical composition, and potential impact on indoor air quality, significant.

WELL promotes the identification, evaluation and management of hazardous ingredients across building materials, cleaning products, waste, outdoor spaces and landscaping.

- Reduce human exposure to hazardous building materials
- Enable informed decision-making
- · Support innovation in green chemistry
- 9. Mind: Mental health plays a vital role in an individual's overall health and well-being: Depression alone is the leading cause of disability worldwide, and mental, neurological and substance use disorders account for 14 percent of the global burden of disease.

Thoughtful and flexible base building design can have an impact on tenant mental health and well-being, and can also help support the implementation of supportive company policies.

- Engage tenants in the process of incorporating healthy elements
- Provide health education and awareness for occupants
- Consider using biophilic design principles and celebrating local art and culture
- 10. Community: Designing built spaces in a way that enables all individuals to access, participate and thrive within the systems and structures of each community is essential to shaping individual and collective health outcomes.

Supportive base building design provides a foundation for supportive company policies.

- Support access to essential healthcare, workplace health promotion and accommodations for new parents
- Establish an inclusive, integrated community through social equity, civic engagement and accessible design

Universal Preconditions

Preconditions define the fundamental components of a WELL space and serve as the foundation of a healthy building. WELL v2 offers a universal set of preconditions for all projects. All preconditions are mandatory for certification. All parts in preconditions are likewise mandatory.

Flexible Optimizations

Optimizations are optional pathways for projects to demonstrate achievement in WELL.

Project teams may choose the optimizations they want to pursue. Further, projects may choose which parts to pursue within optimizations up to the maximum point established for the optimization.

Meaningful Weightings

WELL v2 operates on a points-based system, with 110 points available in each project. All optimizations have maximum point-values. The point-value of a feature is determined by its potential for impact. This is defined as the extent to which a feature addresses a specific health and wellness concern or opportunity for health promotion, and the potential impact of effective intervention.

Space Types

All parts of WELL v2 are designated for specific space types. Space types refer to spaces within a project and not the project as a whole. Identifying space types within a project can help clarify how WELL features apply to that particular project.

Space Type Occupancy

In addition to the classification of space types within a project, WELL v2 also distinguishes spaces based on their level of occupancy:

 Regularly occupied space: areas inside the project where a particular individual normally spends at least one continuous hour or, cumulatively, at least two hours per day such as offices, conference rooms, bedrooms and classrooms. Occupiable space: spaces that can be occupied for any task or activity, including transition areas or balconies, but excluding spaces that are rarely accessed such as storage spaces or equipment rooms.

Rooms larger than 930 m2 (10,000 ft2 ft) may be divided into separate zones (at least 325 m2 (3,500 ft2 each), which may be evaluated for occupancy independently.

Occupant Types

WELL uses specific terminology to refer to groups of individuals that share characteristics. Project teams must employ a single, consistent definition of these terms across relevant features:

- Occupant: any individual within the project boundary.
- Regular occupant: an individual who spends at least 30 hours per month across at least five days within the project boundary (e.g., employee, resident, student).
- Visitor: any occupant who is not a regular occupant (e.g., shopper, museum-goer, hotel guest).
- Employee: an individual who works for the project owner within the project boundary.
- Eligible employee: an employee identified as qualifying for benefits. At a minimum, this includes all full-time employees but may also include part-time employees, interns, contracted workers and other non-full-time employees as appropriate.

Feature Applicability and Scoring

Features have varying scopes of applicability for WELL Core projects, depending on the relevant population and project area.

Applicability designations are defined as follows:

- Whole Building includes all areas within the project boundary. To use this pathway, project teams need to submit as part of documentation review, design assumptions and sample cut-sheets (as applicable) that justify the budget and can be used by the tenant during their design and construction process.
- Extent of Developer Build-out includes all non-leased space and all construction within the leased space for which the project team is responsible.
- Leased Spaces Includes all areas within the project boundary that are leased to or owned by tenants, including areas for lease or for sale that are not currently occupied.
- **Non-leased Spaces** are areas within the project boundary that are not considered leased space.

- Building Management Staff are individuals responsible for maintaining and operating the building, including contractors and sub-contractors. Workers who spend less than 30 hours per month in the building are not considered building management staff.
- Direct Staff are building staff under direct employment by the project owner. Projects must use a single consistent population across all features, including preconditions

Dvnamic WELL Scorecard

WELL Online guides project teams through the development of a unique scorecard. The digital platform recommends a selection of features based on project-specific parameters that can be further defined and refined by the project team.

Scoring and Certification Levels

Projects must achieve all preconditions, as well as a certain number of points towards different levels of WELL Certification:

WELL v2

| Total | WELL v1 | | WELL v2 | |
|--------------------|----------------------------------|--------------------------------|----------------------------------|--------------------------------|
| Points Achieved | Minimum points per concept | Level of Certifica- tion | Minimum points per concept | Level of Certifica- tion |
| 40 pts | 0 | WELL Bronze | 0 | WELL Core Bronze |
| 50 pts | 1 | WELL Silver | 0 | WELL Core Silver |
| 60 pts | 2 | WELL Gold | 0 | WELL Core Gold |
| 80 pts | 3 | WELL Platinum | 0 | WELL Core Platinum |

Projects may earn no more than 12 points per concept and no more than 100 points total across the ten concepts.

Projects can also pursue an additional ten points in the Innovation concept. A project may seek additional points in concepts where the project has already reached the 12-point maximum by submitting features or parts not already pursued within those concepts as innovations for consideration. These submissions are worth one point per part, regardless of the listed point value of that part.

WELL v2 pilot

| Total | WELL Certification | | WELL Core Certification | |
|--------------------|----------------------------------|--------------------------------|----------------------------------|--------------------------------|
| Points Achieved | Minimum points per concept | Level of Certifica- tion | Minimum points per concept | Level of Certifica- tion |
| 40 pts | - | - | 1 | WELL Core Bronze |
| 50 pts | 2 | WELL Silver | 1 | WELL Core Silver |
| 60 pts | 2 | WELL Gold | 1 | WELL Core Gold |
| 80 pts | 2 | WELL Platinum | 1 | WELL Core Platinum |

For WELL Core Certification, projects must earn a minimum of one point per concept. Projects may earn no more than 12 points per concept.

WELL Core projects have different point-values for parts and features than owner-occupied projects, based on the extent to which the requirements benefit all occupants within the project. Features that must be met for the whole building are generally worth more for WELL Core, while features with no or limited effect on tenants are generally reduced in value.

Some features allow WELL Core projects to earn points for applying the feature outside of the leased space and earn an additional point for achieving the requirements for their tenants. In addition, some features allow projects where non-leased spaces makes up 40% or more of the project area to earn an additional point without extending requirements to other populations or spaces. Projects are only eligible for one additional point per feature. To earn additional points, WELL Core projects should first meet the baseline requirements of the feature established in WELL Core guidance. The exception is projects that do not include the baseline occupant population or relevant project area within their scope; these projects may pursue the additional points in their scorecard without meeting the baseline feature requirement first.

WELL Core

WELL Core Certification is a distinct pathway of achievement for core and shell buildings seeking to implement fundamental features in the base building for the benefit of tenants/residents. All building types can register for WELL Core provided that at least 75% of the project area is occupied by one or more tenants/residents and/or serves as common space in the building accessible to all tenants/residents. Note that offices affiliated with the project owner but unrelated to the management of the project property may be considered a tenant so long as additional tenants unaffiliated with the project owner occupy at least 60% of the gross floor area.

Scope

For WELL Core projects, at least 2.5% of the total building floor area must be available for performance testing. The available testing area must include all common areas and spaces directly under the control of the building management team. If common areas and spaces under owner control comprise less than 2.5% of total building floor area, the project must supplement with tenant spaces to reach this threshold. Testing in leased spaces in these cases can take place before or after tenant occupancy.

Some performance-based optimizations explicitly state that they require testing in tenant spaces to be awarded. The project is responsible for identifying and communicating with Green Business Certification, Inc. (GBCI) and the WELL Performance Testing Agent the particular spaces which are available for testing.

WELL Process for Certification

The certification depends on the features you choose to pursue – any of one of three levels: Silver, Gold, or Platinum.

At the point of registration, projects may elect to either:

- 1. Register for single-cycle certification
- 2. Register and activate a three-year or five-year subscription (WELL v2 only)

For projects that sign-up for subscription, recertification and mid-cycle reviews are included.

- Register your project to get started, and meet your coaching contact to talk process and review your certification goals.
- Submit documentation to demonstrate that you've met the mandatory elements of the WELL Building Standard (preconditions), as well as optional strategies (optimization features) that meet your goals.
- Complete performance verification with your WELL Performance Testing Agent, who will visit your project and complete visual inspections as well as performance tests.
- Certify: Depending on the features you choose to pursue, you can earn certification at one of four levels: Bronze, Silver, Gold or Platinum.
- Recertify: Demonstrate your commitment to top performance by renewing your certification every three years, including additional onsite testing and documentation review.

WELL Reviewer and Performance Testing Agent Roles and Responsibilities

- WELL Reviewer: it is the third party individual responsible for reviewing the project for certification. After submission for certification the WELL Reviewer is responsible for reviewing both documentation and performance test results for compliance with WELL requirements.
- WELL Performance Testing Agent: conducts performance tests on-site, send samples to labs for testing and submit results for Performance Review by the WELL Reviewer.
- · Project Team:
 - Project Administrator: He acts as project manager and oversees the WELL process. He is the primary point of contact on the project and must be

copied on all correspondence with IWBI and the WELL Reviewer. This individual will also be the recipient of a comprehensive WELL report following documentation review and performance verification, as well as the WELL award package. He can be a WELL Accredited Professional (WELL AP), the owner, or another designated representative of the project team. Project administrator is ultimately responsible for the overall quality of the documents submitted and is expected to complete a thorough quality control check of all documentation and forms prior to submission for review.

 Owner: He is responsible for authorizing registration of the project and will be required to validate various documents used to demonstrate that WELL features are satisfied.

An owner can be an individual property owner or a representative who is given a delegated responsibility by an entity that owns the property. Owners have the authority to hold and control project-relevant property and to authorize decisions pertaining to that property.

- Additional Signatories: These are appropriate professionals such as architects, contractors, and mechanical, electrical and plumbing (MEP) engineers that are required to provide specific declarations and/ or calculations pertaining to the project. Further, an owner's representative may also play a role in affirming that design and operational requirements are met in place by the owner.
- WELL Accredited Professional (WELL AP): The WELL AP recognizes building industry professionals who are knowledgeable of the conceptual and applied frameworks of WELL and are experienced in its application.
 WELL APs can help guide projects to successful certification awards.
- WELL Coaching Support: Upon official registration to WELL, all projects gain access to WELL coaching support, which includes a suite of educational resources and tools to guide projects through the certification process, along with the ability to communicate with the coaching team via the support tab of the WELL digital platform.

Excellence in Design for Greater Efficiencies (EDGE)

EDGE is a recent addition to the several green building certification systems in existence. It stands for Excellence in Design for Greater Efficiencies and is administered by **Green Business Certification Inc. (GBCI)** in over 170 countries around the world; where its presence and practice are highly recognized in the design and construction of buildings.

Launched in July 2014 and currently funded by the UK government, EDGE is a global network of certifiers and accredited EDGE Experts who support the collective ambition to mainstream green buildings and help fight climate change. EDGE was created to respond to the need for a measurable and credible solution to prove the business case for building green and unlock financial investment. It was established to make buildings more resource and cost efficient. It makes possible for various project stakeholders to devise meaningful ways to incorporate energy, water and other resource saving generation into the design and ultimately translated into the built-environment.

An innovation of IFC, a member of the World Bank Group, EDGE is a cutting-edge, intelligent software tool that promotes reduction in carbon footprint by encouraging and adopting resource-efficient innovations that allows buildings to be cost efficient. The strategies integrated into the project design are verified by an EDGE Auditor and certified by GBCI.

EDGE is comprised of a web-based software application, a universal standard and a certification system. The software application can quickly predict the savings generated by applying a sampling of potential energy or water-saving design options to reveal the most viable path. The state-of-the-art engine has a sophisticated set of city-based climate and cost data, consumption patterns and algorithms for predicting the most accurate performance results.

EDGE creates a new global standard by requiring that a green building achieve a projected minimum reduction of 20% in energy and water usage, and embodied energy in materials as benchmarked against a standard building.

EDGE certification applies to new construction, existing buildings and major renovations of homes, offices, hotels, retail and hospitals.

EDGE Certification

The EDGE certification processes commence at the early design stage, when all project information and data are entered into the EDGE software and green options are selected. The project must meet the EDGE standard of 20% improvement in energy, water, and materials as measured against local construction practice. Once this is achieved, the project is registered for certification.

The EDGE Certification Process

Development Data

Measurement of Building Areas

Prior to 1989, the development intensity for residential development was measured in terms of density i.e. persons per hectare. For non-residential developments such as industrial, warehousing, institutional, commercial buildings etc., the intensity was measured in terms of plot ratio.

Following the introduction of the new development charge system from 1 September 1989, the Gross Floor Area concept was adopted to determine the development intensity of a building, thereby standardizing the previous methods of calculating development intensity for different types of developments.

The definition of Gross Floor Area (GFA) based on Rider Levett Bucknall Philippines, Inc. Operating Procedure No.2 (OP-02) is as follows:

All covered spaces fulfilling the functional requirements of the building measured to the outside face of the external walls or the external perimeter. Areas occupied by partitions, columns, internal structural or party walls, stairwells, lift shafts, plant rooms, water tanks and the like are included. Sloping surfaces such as staircases and car park ramps have been measured flat on plan.

Note that the rooms passing through two or more storey (e.g. foyer, atrium, lobby etc.) - the area is measured once only at floor level. The rooms passing through two or more storey with a gallery or mezzanine - the area is measured once only at ground floor level and the area of the mezzanine or gallery added.

Extreme care must therefore be taken to ensure that any areas quoted by the Architect or Client are understood by all parties.

Gross Floor Area (G.F.A.)

The sum of the "Fully Enclosed Covered Area" and "Unenclosed Covered Area" as defined.

Fully Enclosed Covered Area (F.E.C.A)

The sum of all areas at all building floor levels, including basements (except unexcavated portions), floored roof spaces and attics, garages, penthouses, enclosed porches and attached enclosed covered ways alongside buildings, equipment rooms, lift shafts, vertical ducts, staircases and any other fully enclosed spaces and usable areas of the building, computed by measuring from normal outside face

of the exterior walls but ignoring any projections such as plinths, columns, piers and the like which project from the normal inside face of the exterior walls.

It shall not include open courts, light wells, connecting or isolated covered ways and net open areas of upper portions of rooms, lobbies, halls, interstitial spaces and the like which extend through the storey being computed.

Unenclosed Covered Area (U.C.A)

The sum of all areas at all building floor levels, including roof balconies, open verandahs, porches and porticos, attached open covered ways alongside buildings, under-crofts and usable space under buildings, unenclosed access galleries (including ground floor) and any other trafficable covered areas of the building which are not totally enclosed by full height walls, computed by measuring the area between the enclosed walls or balustrade (i.e. from the inside face of the U.C.A. excluding the wall or balustrade thickness).

When the covering element (i.e. roof or upper floor) is supported by columns, is cantilevered or is suspended, or any combination of these, the measurements shall be taken to the edge of the paving or to edge of the cover, whichever is lesser. U.C.A. shall not include eaves overhangs, sun shading, awnings and the like where these do not relate to clearly defined trafficable covered areas, nor shall it include connecting or isolated covered ways.

Net Rentable Area (N.R.A.)

The sum of rentable areas within a commercial type building, measured from the inside face of exterior walls and windows at a height of 1.5m above floor level and including the area occupied by structural columns.

Deductions from NRA:

- All stairs, toilets, cleaner's cupboards, lift shafts, escalators and tea rooms where provided as standard facilities in the buildings.
- Lobbies between lifts facing other lifts serving the same floor.
- Areas set aside as public space or thoroughfares and not used exclusively by occupants of the building. (Note: excludes any additional common areas resulting from the sub-division of a whole floor to accommodate more than one tenant.)
- Areas set aside as plant and lift motor rooms or for the provision of facilities or services to the building and not for the exclusive use of the occupants of the building.

PHILIPPINE CONSTRUCTION INFORMATION

- Areas set aside for use by service vehicles and for delivery of goods and access ways thereto.
- Areas set aside for car parking and access ways thereto.

Usable Floor Area (U.F.A.)

The sum of the floor areas at floor level from the general inside face of walls of all interior spaces related to the primary function of the building. This will normally be computed by calculating the "Fully Enclosed Covered Area" (F.E.C.A.) and deducting all of the areas supplementary to the primary function of the building.

Deductions from UFA:

- Common Use Areas. All floored areas in the building for circulation and standard facilities provided for the common use of the occupants, tenants and/or the public such as lobbies and foyers to entrances, stairways and lifts, stairways, landings and fire escapes, verandahs and balconies, corridors and passages, toilets and rest room areas, cloak and locker rooms, cleaner's rooms, including stores and cupboards, tea making and similar amenity areas.
- Service Areas. All areas set aside for building plant supplying services and facilities common to the building for the use of occupants, tenants and/or public such as mechanical plant and equipment rooms, electrical equipment and switch rooms, tank rooms, lift motor rooms, meter cupboards, telecommunications switch rooms, refuse collection areas, loading bays and all car parks including access ways thereto.
- Non-habitable Areas. All non-habitable building spaces such as that occupied by internal columns and other structural supports, internal walls and permanent partitions, lift shafts, service ducts and the like.

Government System Implemented for Private and Public Construction

In the Philippines, there are two distinct systems that govern the tendering and implementation of public and private construction contracts.

Private Construction

Contractors are usually selected on the basis of their reputations as competent builders or in consideration of their personal relationships with the project owner. Private contracts are also generally negotiated or tendered through sealed canvass bidding and some through electronic bidding (e-bidding). The contract is awarded at the price agreed upon through the negotiation process. The terms and conditions of the contract constitute the law or agreement between the contracting parties.

Public Construction

Presidential Decree No. 1594 and its Implementing Rules and Regulations (much like the AB 92 of Sweden) primarily governs government infrastructure contracts, particularly those funded from local appropriations, by the contract terms and conditions. However, for projects funded partly or wholly from foreign financing, the International Conditions of Contract or "FIDIC" and the bank guidelines apply.

The Implementing Rules and Regulations of Presidential Decree No. 1594 and Its Objectives

Presidential Decree No. 1594 has been formulated and approved by the Government of The Philippines to adopt a comprehensive, uniform and updated set of policies and guidelines, rules and regulations covering government contracts for government infrastructure and other construction projects in order to achieve a more efficient and effective implementation of these projects. It is intended to:

- Bring about maximum efficiency in project implantation and minimize project cost and contract variations through sound practices in construction management.
- Promote healthy partnership between the government and the private sector in furthering national development, and
- Enhance the growth of the local construction industry and optimize the use of indigenous manpower, materials and other resources

PHILIPPINE CONSTRUCTION INFORMATION

Generally, government construction projects are undertaken by contract after competitive public bidding. Projects may be undertaken by administration or "force account" or by negotiated contract only in exceptional cases where time is of the essence, or where there is lack of qualified bidders or contractors, or where there is conclusive evidence that greater economy and efficiency would be achieved through this arrangement.

Life Cycle Economy

Under Philippine government projects, a Warranty Period of one (1) year is provided and calculated from the date of final completion of the contract works as certified by the Executing Agency. Within the above prescribed period, the Contractor should maintain the facility at his own expense and is liable for any failure or defect noted which is traceable to poor workmanship, use of poor quality materials or non-compliance to plans and specifications.

The Contractor, at his own expense, should correct the defects and failure or refusal to do so will warrant the Executing Agency to carry out the corrective work with all the consequential expenses chargeable from any monies due to the Contractor. However, defects and failures due to ordinary wear and tear and for causes other than the fault of the Contractor shall not be taken against the Contractor.

After one year, a Certificate of Acceptance is issued by Executing Agency and the facility is now turned over to the Government for property management and maintenance. However, the contractor, after the date of issuance of a Certificate of Final Acceptance for the project, remains criminally and administratively liable for any damages or defects discovered on the works due to faulty construction and or use of materials of inferior quality as provided under Article 1723 of the Civil Code of the Philippines.

- 2.) Managing the Construction Process for Government Projects in the Philippines Department of Public Works and Highways (DPWH)

Construction Industry-Related Agencies

The Construction Industry Authority of the Philippines (CIAP)

The CIAP was created to promote, accelerate and regulate the growth and development of the construction industry in conformity with national goals.

Implementing Agencies:

1. Philippine Contractors Accreditation Board (PCAB)

PCAB assumes the functions of the abolished Philippine Licensing Board for Contractors under RA 4566 (Contractors License Law). It mainly issues, suspends and revokes licenses of contractors.

2. Philippine Overseas Construction Board (POCB)

POCB formulates policies, plans, programs and strategies for developing the Philippine overseas construction industry; regulates and control the participation of construction contractors in overseas construction projects; and administers the grant of incentives for Filipino overseas contractors.

3. Philippine Domestic Construction Board (PDCB)

PDCB formulates, recommends, and implements policies, rules, regulations and guidelines and adjudicates disputes arising from public construction projects.

4. Construction Industry Arbitration Commission (CIAC) CIAC Formulates and adopts an arbitration program for

the construction industry. It also enunciates policies and prescribes rules and procedures for construction arbitration.

5. Construction Manpower Dev't Foundation (CMDF)

CMDF formulates an overall construction manpower development plan and strategies, and develops and implements manpower training programs for the construction industry; among others.

Infrastructure

Definition of Terminologies

Construction Cost Data

Average Infrastructure Construction Payment Drawdown

Philippine Infrastructure Information

Public-Private Partnership

Variants of PPP Project Agreements

'Build, Build' Program

Construction Regulations

Definition of Terminologies

Infrastructure

The basic physical and organizational structure needed for the operation of a society or enterprise or the services and facilities necessary for an economy to function. It can be generally defined as the set of interconnected structural elements that provide a framework supporting an entire structure of development. It is an important term for judging a country or region's development.

Types of Infrastructure:

Roads

Energy

Rails

- Marine
- Transport Intermodal
- Aviation

Mining

- Land Development
- Bridges and Tunnels
- · Process Engineering
- Water and Waste Water

These networks deliver essential services and support social interactions and economic development. They are society's lifelines.

Rapid Transit

A type of high-capacity public transport generally found in urban areas. Rapid transit systems are electric railways that operate on an exclusive right-of-way, which cannot be accessed by pedestrians or other vehicles of any sort and which is often grade separated in tunnels or on elevated railways.

Transport Intermodal

Involves the use of more than one mode of transport for a journey. There are two types:

- Intermodal passenger transport the major goal is to reduce dependence on automobiles as the major mode of ground transportation and increase use of public transport.
- Intermodal freight transport reduces cargo handling, improves security, reduces damage and loss and allows freight to be transported faster. Reduced costs over road trucking is the key benefit for intra-continental use.

Surface Mining

Is a method of mining used to extract minerals and metals which are near the surface of the earth. Techniques of surface mining include:

- Open-pit mining is the recovery of materials from an open pit in the ground, quarrying or gathering building materials from an open-pit mine.
- Strip mining consists of stripping surface layers off to reveal ore/seams underneath.
- **Mountaintop removal** is commonly associated with coal mining, which involves taking the top of a mountain off to reach ore deposits at depth.
- Landfill mining involves sites where landfills are excavated and processed.

Wastewater Treatment Plant

Is a physical plant where various physical, biological or chemical processes are used to change the properties of the wastewater (e.g. by removing harmful substances) in order to turn it into a type of water (also called effluent) that can be safely discharged into the environment or that is usable for a certain reuse purpose.

Dam

Is a barrier that impounds water or underground streams. Dams generally serve the primary purpose of retaining water, while other structures such as floodgates or levees (also known as dikes) are used to manage or prevent water flow into specific land regions.

Purposes of dams are: 48% for irrigation, 17% for hydropower (production of electricity), 13% for water supply, 10% for flood control, 5% for recreation and less than 1% for navigation and fish farming.

Renewable Energy

Is generally defined as energy that comes from resources which are naturally replenished on a human timescale such as sunlight, wind, rain, tides, waves and geothermal heat.

Port

A sheltered harbor where marine terminal facilities are provided, consisting of piers or wharves at which ships berth/dock while loading or unloading cargo, transit sheds and other storage areas where ships may discharge incoming cargo, and warehouses where goods may be stored for longer periods while waiting distribution or sailing.

Process Engineering

Focuses on the design, operation, control, and optimization of chemical, physical, and biological processes. Process engineering encompasses a vast range of industries, such as chemical, petrochemical, mineral processing, advanced material, food, pharmaceutical, software development and biotechnological industries.

Project Capital Costs

Are normally the initial cost of the project, also referred to as the initial investment for the project. It is within this phase that the project is designed and built.

The capital cost for a construction project includes the expenses related to the initial establishment of the facility:

- Land acquisition, including assembly, holding and improvement
- · Planning and feasibility studies
- · Architectural and Engineering design
- Construction, including materials, equipment and labor
- Field Supervision of construction
- Construction financing
- Insurance and taxes during construction
- Owner's general office overhead
- Equipment and furnishings not included in construction
- Inspection and Testing

Operations and Maintenance Costs

In addition to building and owning infrastructure facilities, the concessionaire (developer) is normally required to operate and maintain the facility over an extended period of time. The concession period can extend for 20 to 30 years. At the end of the period the facility is transferred back to the municipality or government agency.

The staff involved with operating infrastructure facilities can include Management, Supervisors, System Controllers, Fare Collectors and Vehicle Operators. Energy Consumption can include electric power consumption for transit vehicles and fuel for buses. Consumables include tickets.

Maintenance can include such things as the cost of maintaining and cleaning buildings, repairing highway pavements, cutting and watering grass, replacing bridge bearings and maintaining ticket vending machines. Maintenance can also include the labor and parts required to operate transit vehicles over the concession period.

Transferring the facility back to the government includes demobilization costs such as clean-up costs, staff severance as well as audit fees required to transfer the assets. The operation and maintenance cost in subsequent years over the project life cycle includes the following expenses:

- Land rent, if applicable
- Operating staff
- · Periodic renovations
- Insurance and taxes
- Financing costs
- Utilities
- Owner's other expenses
- Labor and material for maintenance and repairs

Concession

A concession gives an operator the long term right to use all utility assets conferred on the operator, including responsibility for all operation and investment. Asset ownership remains with the authority. Assets revert to the authority at the end of the concession period, including assets purchased by the operator. In a concession, the operator typically obtains its revenues directly from the consumer who has a direct relationship with the latter. A concession covers an entire infrastructure system (so may include the operator taking over existing assets as well as building and operating new assets).

Construction Cost Data

The following rates are indicative only and based on normal site condition. It includes an allowance for profit and overhead but excludes preliminaries. The rates are not valid for tendering or pricing of variations.

Land Development

Comprised of survey works, earthworks (cut & fill, block dev't), RROW (base preparation, concrete pavement, asphalt overlay, sidewalk, curb & gutter), wet utilities (water, drainage, sewer system), dry utilities (electrical & auxiliary system, streetlighting system).

| ROADS | Ph | p/m² | |
| (Premix finish including curbs, channels and drainage) | Low | High | |
| Residential estate, 6.80 meters wide excluding foot-paths and nature strips | 13,700 | 14,900 | |
| Industrial estate 10.40 meters wide including minimal to extensive formation | 10,600 | 15,200 | |

Wet Utilities

Includes pipelaying, excavation and backfilling works, manholes, lot connections, testing and commissioning.

| WET UTILITIES | Php/m | |
|-------------------------------|-------|-------|
| | Low | High |
| Blue Water System, PVC Pipes | 1,740 | 2,300 |
| Blue Water System, HDPE Pipes | 2,170 | 2,430 |
| Gray Water System, PVC Pipes | 1,040 | 1,430 |
| Gray Water System, HDPE Pipes | 1,730 | 1,930 |
| Drainage System, RC Pipes | 2,980 | 8,730 |
| Sewer System | 3,720 | 7,020 |

Dry Utilities

Includes primary & secondary ductline, excavation and backfilling works, T-Pad, manhole & cover, service box, terminal cabinet, guide wire, and mandrelling test.

| DRY UTILITIES | Php/m | |
|-------------------|-------|--------|
| | Low | High |
| Electrical System | 8,120 | 15,500 |
| Auxiliary System | 4,780 | 10,500 |

Water and Waste Water

Sewage Treatment Plant

Does not include site dev't, power and water supply during construction in excess of 5m, power and water supply during start-up and testing, power connection of main feeder line to STP MCC, dewatering equipment, tertiary treatment system, ventilation and ducting system, and unforeseen site condition.

| SEWAGE TREATMENT PLANT | Php/m³GLA | |
|---|-----------|--------|
| | Low | High |
| 1000 m³ / day capacity - MEP | 10,400 | 12,600 |
| 1000 m³ / day capacity - Civil (Above Ground) | 13,700 | 17,000 |
| 1000 m³ / day capacity - Civil (Below Ground) | 10,200 | 13,100 |

Deepwell Drilling

Includes drilling of pilot hole, S&I of casing, pumping test, disinfection and water analysis, S&I of submersible deepwell pump, VFD, pumphouse and all necessary fittings to complete the system.

| DEEPWELL DRILLING | Php | / m |
|--|--------|--------|
| DEEPWELL DRILLING | Low | High |
| 250 mm diameter stainless steel casing | 23,600 | 28,800 |

Water Reservoir/Cistern Tank

Includes earthworks, structural, plumbing (equipments, valves, pipes & fittings), electromechanical works, waterproofing, instrumentation and automation, testing and commissioning.

| DESCRIPTION | Php/m | 3 capacity |
|---|--------|------------|
| DESCRIPTION | Low | High |
| Construction of Water Reservoir | 40,200 | 49,200 |
| Construction of Cistern Tank | 47,600 | 58,200 |
| Construction of Overhead Water Tank (per gallon capacity) | 184 | 204 |

Culverts

| CULVERTS | Php / m² GLA | | |
|--|--------------|---------|--|
| COLVERTS | Low | High | |
| RC Box Culvert, Double Barrel (5.0 x 5.0m) | 299,700 | 390,200 | |
| RC Box Culvert, Double Barrel (2.4 x 1.8m) | 110,300 | 144,600 | |
| RC Box Culvert, Single Barrel (2.1 x 1.8m) | 87,400 | 114,400 | |
| RC Pipe Culvert (1050mm in diameter) | 5,940 | 6,830 | |
| RC Pipe Culvert (900mm in diameter) | 5,180 | 5,960 | |
| RC Pipe Culvert (750mm in diameter) | 3,610 | 4,150 | |
| RC Pipe Culvert (600mm in diameter) | 2,420 | 2,770 | |
| RC Pipe Culvert (450mm in diameter) | 1,730 | 2,000 | |
| RC Pipe Culvert (375mm in diameter) | 1,520 | 1,740 | |
| RC Pipe Culvert (300mm in diameter) | 949 | 1,090 | |

Aqueduct Construction

Includes 2 shafts and 3.05 m diameter tunnel with 300mm thickness pre-stressed concrete lining. Method of excavation is by using Tunnel Borring Machine.

| AQUEDUCT CONCEDUCTION | Php | / m |
|--------------------------|---------|---------|
| AQUEDUCT CONSTRUCTION | Low | High |
| 3.05 m diameter Aqueduct | 672,180 | 844,560 |

Manholes

Includes earthworks, manhole frame and cover.

| SUPPLY AND INSTALLATION OF MAN- | Php / unit | | |
|---|------------|---------|--|
| HOLE | Low | High | |
| Sewer Drop Manhole, 900mmØ | 113,920 | 139,250 | |

Public-Private Partnership (PPP)

Refers to arrangements typically from medium to long term between the public and private sectors, whereby some of the services that fall under the responsibilities of the public sector are provided by the private sector, with clear agreement on shared objectives for delivery of public infrastructure and/or public services.

List and Status of Philippine PPP Projects As at December 2022

A. AWARDED PROJECTS (SOLICITED & UNSOLICITED)

Notice of Award (NOA) has been issued to the winning private proponent(s).

- New Manila International Airport (Bulacan International Airport)
- 2. South Integrated Transport System (ITS) Project (Taguig Integrated Terminal Exchange)
- 3. Caticlan Airport Development Project
- 4. Cavite-Laguna Expressway (CALAX)
- 5. Metro Manila Expressway C6
- 6. Metro Manila Skyway Stage 3 (MMSS3) Project
- 7. MRT Line 7
- 8. New Clark City Mixed Use Industrial Real Estate Development
- 9. NLEx-SLEx Connector Road Project
- Cagayan North International Airport Project (Lal-lo Airport Project)
- 11. Caliraya-Botocan-Kalayaan (CBK) Power Plant
- 12. Daang Hari-SLEX Link Road (Muntinlupa-Cavite Expressway) Project
- 13. Light Rail Transit Line No. 3 (MRT 3)
- 14. Mactan-Cebu International Airport Project
- Manila-Cavite Toll Expressway (including C5 South Link Expressway Project)

- 16. Manila-North Expressway (NLEX) Project including NLEX North Harbor Link (Segments 8.1, 8.2, 9, and 10)
- 17. Metro Manila Skyway Stage 1 & 2 Project
- 18. Mindanao Coal-Fired Thermal Power Plant
- 19. NAIA Expressway Project
- 20. Pagbilao Coal-Fired Power Plant Project
- 21. South-Luzon Expressway (SLEX) Project Toll Roads 1, 2, 3, and 4 (TRs 1-4)
- 22. Southern Tagalog Arterial Road (STAR) Project
- 23. Southwest Integrated Transport System (ITS) Project (Parañague Integrated Terminal Exchange)
- 24. Sual Coal-Fired Thermal Power Plant Project
- 25. Tarlac-Pangasinan-La Union Expressway (TPLEX)
 Project

B. PPP PIPELINE

Projects Under Review by Implementing Agencies (UNSOLICITED)

NEDA-Board approved projects undergoing review by Implementing Agencies

- 1. New Bohol International Airport Project
- 2. PhilHealth IT Transformation Project
- Upgrade, Expansion, Operations & Maintenance of Laguindingan Airport
- 4. Boracay Bridge Project
- Cavite-Tagaytay-Batangas Expressway (CTBex)
 Project
- 6. Cebu Monorail Transit System Project
- 7. East-West Rail Project
- 8. Fort-Bonifacio Makati Sky Train Project
- 9. Laguna Lake Rehabilitation and Development Project
- 10. MRT 7 Airport Access-North Line Project
- 11. MRT 7 Katipunan Spur Line Project
- 12. MRT-11 Project
- 13. New Metro Manila Food and Transport Hub Project
- 14. North Luzon Express Terminal (NLET) Project
- Tarlac-Pangasinan La Union Expressqay (TPLEX) Extension Project

For Approval of Relevant Government Bodies

Project is currently undergoing evaluation by the appropriate government body (i.e. ICC-Cabinet Committee, Board, and the different local development councils).

- Cagayan Valley Medical Center (CVMC) Hemodialysis Center Project
- Baguio General Hospital Medical Center (BGHMC) Renal Center Building Project
- 3. C5 MRT 10 Project

INFRASTRUCTURE

- 4. Metro Cebu Expressway
- 5. MRT 7 variation proposal
- Operations and Maintenance of the North-South Commuter Rail
- UP Philippine General Hospital (PGH) Manila Cancer Center Project
- 8. UP Philippine General Hospital (UP-PGH) Diliman Project

Projects Under Conceptualization and Development

This list includes other projects in the pipeline currently at the earlier stages of project conceptualization and development. Implementing agencies are currently assessing the project's level of priority, and whether it is to be undertaken using the PPP scheme.

- 1. Northern Mindanao Railway Project
- Pacific Eastern Seaboard Expressway ("Luzon Eastern Seaboard"), Infanta - Atimonan Segment
- 3. San Mateo Railway Proiect
- 4. UP Citimall Development Project
- 5. Vaccine Self-Reliance Project (VSRP)
- Central Luzon Link Expressway (CLLEX) Phase 1 O&M and Phase 2 Project
- 7. Dingalan-Capas-Botolan Expressway
- 8. Iloilo-Capiz-Aklan Expressaway
- 9. Manila Bay-Pasig River-Laguna Lake Ferry Project
- 10. Mariveles Wellness Center (MWC)
- 11. Mindoro-Batangas Super Bridge ("Floating Bridge")
- 12. Mt. Data Hotel Project
- Naawan-Opol-Cagayan de Oro City-Villanueva Expressway
- 14. NCR EDSA Busway Project
- North Long Haul (NCR-Ilocos Norte and Cagayan) Inter-Regional Railway Project
- 16. North Luzon Expressway East, Phase II
- 17. Pangasinan-Nueva Ecija Expressway

Retrieved from: ppp.gov.ph

Variants of PPP Project Agreements

Build-and-Transfer (BT)

A contractual arrangement whereby the Project Proponent undertakes the financing and Construction of a given infrastructure or development facility and after its completion turns it over to the Agency or LGU concerned, which shall pay the Project Proponent on an agreed schedule its total investment expended on the project, plus a Reasonable Rate of Return (ROR) thereon. This arrangement may be employed in the Construction of any Infrastructure or Development Projects, including critical facilities which, for security or strategic reasons, must be operated directly by the Government.

Build-Lease-and-Transfer (BLT)

A contractual arrangement whereby a Project Proponent is authorized to finance and construct an infrastructure or development facility and upon its completion turns it over to the Agency/LGU concerned on a lease arrangement for a fixed period, after which ownership of the facility is automatically transferred to the Agency/LGU concerned.

Build-Operate-Transfer (BOT)

A contractual arrangement whereby the Project Proponent undertakes the Construction, including financing, of a given infrastructure facility, and the operation and maintenance thereof. The Project Proponent operates the facility over a fixed term during which it is allowed to charge facility users appropriate tolls, fees, rentals, and charges not exceeding those proposed in its bid or as negotiated and incorporated in the contract to enable the Project Proponent to recover its investment, and operating and maintenance expenses in the project.

The Project Proponent transfers the facility to the Agency/LGU concerned at the end of the fixed term that shall not exceed fifty (50) years: Provided, that in the case of an Infrastructure or Development Facility whose operation requires a public utility franchise, the proponent must be Filipino or, if a corporation, must be duly registered with the Securities and Exchange Commission (SEC) and owned up to at least sixty

percent (60%) by Filipinos. This build-operate and-transfer contractual arrangement shall include a supply-and-operate scheme which is a contractual arrangement whereby the supplier of equipment and machinery for a given infrastructure facility, if the interest of the Government so requires, operates the facility providing in the process technology transfer and training to Filipino nationals.

Build-Own-and-Operate (BOO)

A contractual arrangement whereby a Project Proponent is authorized to finance, construct, own, operate and maintain an infrastructure or development facility from which the Project Proponent is allowed to recover its total investment, operating and maintenance costs plus a reasonable return thereon by collecting tolls, fees, rentals or other charges from facility users; provided, That all such projects upon recommendatin of the Investment Coordination Committee (ICC) of the National Economic and Development Authority (NEDA), shall be approved by the President of the Philippines. Under this project, the proponent who owns the assets of the facility may assign its operation and maintenance to a Facility operator.

Build-Transfer-and-Operate (BTO)

A contractual arrangement whereby the Agency/LGU contracts out the Construction of an infrastructure facility to a private entity such that the Contractor builds the facility on a turn key basis, assuming cost overruns, delays, and specified performance risks. Once the facility is commissioned satisfactorily, title is transferred to the implementing Agency/LGU. The private entity however operates the facility on behalf of the implementing Agency/LGU under an agreement.

Contract-Add-and-Operate (CAO)

A contractual arrangement whereby the Project Proponent adds to an existing infrastructure facility which it is renting from the Government and operates the expanded project over an agreed Franchise period. There may or may not be a transfer arrangement with regard to the added facility provided by the Project Proponent.

Develop-Operate-and-Transfer (DOT)

A contractual arrangement whereby favorable conditions external to a new infrastructure project which is to be built by a Project Proponent are integrated into the arrangement by giving that entity the right to develop adjoining property, and thus, enjoy some of the benefits the investment creates such as higher property or rent values.

Rehabilitate-Operate-and-Transfer (ROT)

A contractual arrangement whereby an existing facility is turned over to the Project Proponent to refurbish, operate and maintain for a Franchise period, at the expiry of which the legal title to the facility is turned over to the Government. The term is also used to describe the purchase of an existing facility from abroad, importing, refurbishing, erecting and consuming it within the host country.

Rehabilitate-Own-and-Operate (ROO)

A contractual arrangement whereby an existing facility is turned over to the Project Proponent to refurbish and operate with no time limitation imposed on ownership. As long as the operator is not in violation of its Franchise, it can continue to operate the facility in perpetuity.

Swiss Challenge

Is a form of public procurement in some (usually lesser developed) jurisdictions which requires a public authority (usually an agency of government) which has received an unsolicited bid for a public project (such as a port, road or railway) or services to be provided to government, to publish the bid and invite third parties to match or exceed it. The bids and awards committee shall compare and evaluate all the bids by the third party bidders and the original proponent. The original proponent can match or exceed the best proposal.

'Build, Build' (BBB) Program

In his 10-point Socio-economic Agenda, President Rodrigo Duterte envisioned the reduction of poverty from 21.6% in 2015 to 13%-15% by 2022.

Among the reforms that will drive this Agenda is the acceleration of infrastructure and the development of industries that will yield robust growth across the archipelago, create jobs and uplift the lives of Filipinos.

Infrastructure is among the top priorities of his Administration with public spending on infrastructure projects targeted to reach 8-9 trillion pesos from 2017-2022.

The 'Build, Build, Build' Program, also known as the thrust of the "Dutertenomics" policy, is a coordination between the National Economic Development Authority (NEDA), the Department of Public Works and Highways (DPWH), the Department of Transportation (DOTr), and the Bases Conversion and Development Authority (BCDA). These major infrastructure agencies aim at developing high impact projects that are envisioned to increase the productive capacity of the economy, create jobs, increase incomes, and strengthen the investment climate leading to sustained inclusive growth.

List and Status of Big-Ticket Infrastructure Projects As at August 2022

A. ROADS AND BRIDGES

Completed

- Luzon Bypass Infrastructure Project
- 2. Metro Manila Skyway Stage 3
- 3. NAIA Expressway Phase II
- 4. Urdaneta City Bypass Road
- 5. BGC-Ortigas Center Link

Construction Regulations

International Federation of Consulting Engineers (FIDIC)

Founded in 1913, FIDIC is charged with promoting and implementing the consulting engineering industry's strategic goals on behalf of its Member Associations and to disseminate information and resources of interest to its members. Today, FIDIC membership covers 97 countries of the world

Construction Industry Authority of the Philippines (CIAP)

An organization created to promote, accelerate, and regulate the growth and development of the construction industry. It exercises

jurisdiction and supervision over the following implementing boards:

- Philippine Contractors Accreditation Board (PCAB), which issues, suspends, and revokes licenses of contractors:
- Philippine Domestic Construction Board (PDCB), which is assigned to formulate, recommend and implement policies, guidelines, plans and programs for the efficient implementation of public and private construction in the country;
- Philippine Overseas Construction Board (POCB)
 which is assigned to formulate strategies and programs
 for developing the country's overseas construction
 industry;
- Construction Industry Arbitration Commission (CIAC) which takes charge of disputes arising from, or connected with government and private contract.

DPWH Standard Specifications for Public Works and Highways 2004 Edition: Volume II - Highways, Bridges and Airports

PRESIDENTIAL DECREE NO. 1096 National Building Code of the Philippines (NBCP)

States that it is the policy of the State to safeguard life, health, property, and public welfare, consistent with the principles of sound environmental management and control; and to this end, make it the purpose of this Code to provide for all buildings and structures, a framework of minimum standards and requirements to regulate and control their location, site, design, quality of materials, construction use, occupancy, and maintenance.

INFRASTRUCTURE

PRESIDENTIAL DECREE NO. 1594

and its Implementing Rules and Regulations

Prescribes Policies, Guidelines, Rules and Regulations for Government Infrastructure Contracts.

IMPLEMENTING RULES AND REGULATION OF R.A. 9184 The Government Procurement Reform Act

An act providing for the modernization, standardization and regulation of the procurement activities of the government and for other purposes.

Calculation Formulae

| To calculate | Multiply |
|------------------------------|---|
| Area of Triangle | Base by 1/2 height |
| Area of Circle | (radius)² by 3.1416 |
| Area of sector of circle | Length of arc by 1/2 radius |
| Area of square, rhombus | Base x height |
| Area of equilateral triangle | (Side) ² x 0.433 |
| Area of trapezium | Height x 1/2 x (sum of parallel sides) |
| Area of ellipse | Major axis by minor axis x 0.7854 |
| Area of parabola | 2/3 x base x height |
| Circumference of circle | Diameter x 3.1416 |
| Surface area of cone | 4 x (radius) ² x 3.1416 |
| Volume of cylinder | (radius by slant side by 3.1416) + area of base |
| Volume of cube or prism | Area of base by height |
| Volume of cone | Length by breadth by depth |
| Volume of hexagonal prism | (Side) ² by height by 2.598 |
| Volume of Sphere | 4/3 x (radius) ³ x 3.1416 |
